

## WIRELESS FACILITIES MANAGEMENT

Energy savings are at your finger tips with a wireless facilities management system. By remotely monitoring and controlling the environments of various facilities, most customers see energy savings of **15%-35%**! The system allows you to identify areas for savings, faulty equipment and failure to follow energy guidelines.

1

Wireless mesh network devices are installed in one or more facilities.

2

Data is transmitted from facilities to your office via the Internet.

3

Remotely monitor and control the indoor and outdoor environments of your buildings:

- *Temperature and Humidity*
- *HVAC Systems*
- *Electrical Energy Consumption*

Establish a target for reducing energy waste.

Lock down thermostats or give occupants their very own comfort zone for heating and cooling needs.

Perform building audits to ensure installation specifications are met.

Start realizing potential energy savings today!

- Document your monthly and quarterly energy consumption and cost.
- Establish a target for reducing energy waste.
- Call **Leveraging Technology** to conduct a free energy assessment that will document real-time energy consumption.
